Subject: Animas River Stakeholder Group data format

Hi Jeff: attached is the excel spread sheet with the format the Animas River Stakeholder Group uses for management of the Animas River data.
It would be greatly appreciated if you could enter the data from the Oct. 2013 sampling event from SCRIBE.

If you have questions, let me know or contact Bill Simon from the Stakeholder group directly.

Thanks, Mike

Hi Bill: Sorry I can't help out w/ the phone or USGS Report. May be Rob Runkle can provide the report?

I am hoping to get the Oct. data put into the ARSG format and avoid all the SCRIBE issues. Could you please send me a spread sheet that has the format on it so we make sure and get it right. I think I have someone agreeing to enter the data in the correct format.

Thanks,

Mike

Subject: Cell phone; S. Church Fate and Transport paper

Hi everyone,

I have a request. At some point I loaned out my desk copy of Stan Church's study on the fate and transport of metals throughout the Animas watershed. Church, S.E., Kimball, B.A., Fey, D.L., Ferderer, D.A., Yager, T. J., and Vaughn, R.B., 1997. "Source, Transport, and Partitioning of Metals between Water, Colloids, and Bed Sediments of the Animas River, Colorado" in *U.S. Geological Survey Open-File Report 97-151*. This was a soft bound volume, 1/2 to 3/4" thick. I really need to get that back now so please think about it and if you've borrowed it I would appreciate its return.

Also I have a need of a Verizon cell phone. Not a smart phone but the 'plane Jane' variety that even I can figure out how to use. I dropped mine in a glass of water on my night stand and although I performed various tricks it no longer functions. So if you've upgraded and no longer have a use for an older Verizon phone let me know; I will happily compensate you for it.

So that's about it. I am in pretty good health these days and Peter Butler and Steve Fearn have been great to work with, helping with coordinating ARSG efforts. Our meetings are well attended and hopefully we will eventually come up with a solution in Upper Cement Creek that will be employed to significantly reduce the loading from the historic mines in that area. Please continue attending our monthly meetings when you can and let any of us three co-coordinators know what we can do to better serve our collaborations needs.

Sincerely,

Bill Simon
